BRIGHT TV

1. Prime Time + Afternoon are your peaks. Biggest light-blue spikes hit during Prime Time and Afternoon almost everyday. Saturday Prime Time ~20 hours, Wednesday Afternoon ~20 hours, Sunday Afternoon ~18 hours Insight: People watch longest during afternoons and prime time. This is when you should air your best content.
2.. Night + Late Night are the valleys. Every "Night" and "Late Night" drops hard. Monday Night is the lowest point on the whole chart Insight: Lowest engagement. Good slot for reruns, cheap content, or maintenance. Don't waste premieres here.
3.. Weekends winSaturday + Sunday have the highest overall peaksInsight: Viewers have more free time. Stack your tentpole events/movies on Sat/Sun Prime Time + Afternoon.
4.. Standard deviation spikes with avg hoursDark blue area also jumps during Prime Time/Afternoon, especially Wednesday AfternoonInsight: When more people watch, there's also more variance. Means some shows in Prime Time are huge hits, others flop hard. Prime Time is high risk, high reward.
5. Wednesday Afternoon is unusualThat's the biggest dark-blue spike relative to light-blueInsight: Something aired Wed Afternoon that caused massive inconsistency — maybe one channel had a huge live event while others tanked. Worth drilling into what that was.
